

Capstone Project  
Milestone 3 TDD

Script for Video Presentation

INTRODUCTION (Jonathan)

Web pages exist for lots of reasons. Some are for vanity, some for information or news, and some are there to solve a problem. Capstone Reviews exists to solve a problem.

Have you ever found yourself craving a certain kind of food?

Italian, Asian, Mexican, Chicken and Waffles?

Here in Atlanta, there are plenty of restaurants around to help you satisfy those cravings.

But what if you don't know the ones near you?

If you're close to home, you can just ask your friends about their experiences.

But if you're away from home,  
you have no way to know  
if a given restaurant is good or bad.

To make matters worse,  
restaurant food is more expensive than ever,  
while the quality of service seems to be  
moving in the opposite direction from prices.

This is how Capstone Reviews can help!

Just look up a restaurant on our site  
and save yourself a headache

(sometimes an actual headache)

by reading about other diners' experiences  
with a given restaurant.

After all, it would be very disappointing  
to go to the nearest Korean Fried Chicken restaurant  
only to find it isn't as good as it looked.

Then you go away with an unsatisfied craving  
and a hole in your wallet to boot.

Here is how our site works.

Look for a restaurant by name or by cuisine.

Each restaurant shows a rating based on  
actual reviews posted by other diners.

What's more, if you don't agree with the review,  
you can comment on it.

To avoid shenanigans like review-bombing,  
the application requires that you log in  
before you can post a review or a comment.  
It also limits users to one review per restaurant.

## MEET THE DEVELOPERS

Also on our site, you can meet our Development Team:  
Whitney Brown, Felix Guzman, Jason Lewis, and myself, Jonathan  
Eason.

These dedicated professionals labored at all hours on

different parts of the application.

You can see each Developer's LinkedIn profile from the About page.

Now Jason and Felix will go over the technical side of the site, and Whitney will bring it all home. Thank you for visiting Capstone Reviews, and bon appetit!

#### BODY

(Jason will discuss technologies used in the project;  
Felix will discuss functionality etc.)

#### SUMMARY (Whitney)
